Account Guard
Advanced Plus MFA

rocket IT

Credentials are targets
36% of data breaches involve phishing. Once credentials are harvested they often go up for sale on the Dark Web. Unwanted account access is now a risk.

Humans make mistakes
90% of data breaches involve human error. Cyber criminals also continuously try to breach popular services to gain access to their credential vault.

Strong MFA is vital
It is vital to protect your business users against unauthorised access. Using a hardware based authenticator is a safe way to prevent an account takeover as the physical key is needed to login.

Modern MFA addresses modern threats.

Using a security key as a 2nd requirement to access an application is like having a deadlock on your front door and you have the only key.

Authentication using only a username and password is single-factor authentication. By adding an additional, physical layer of MFA with security keys, SMBs can significantly reduce cyber risks.

MFA raises the bar for security by requiring a user to offer 2 out of 3 factors to verify their identity:

- Something you know
(e.g. username and password)

- Something you have
(e.g. A security key or token)

- Something you are
e.g. biometric – fingerprint, facial recognition

Phishing-resistant MFA is the modern and effective approach to keeping your hard work, brand image, and business protected.

Benefits-at-a-glance

- Bolsters security in your company
- Phishing proof authentication
- Optional backup key
- Works with NFC devices
- Waterproof and crush resistant
- No batteries required
- No client software needed
- No time syncronisation issues
- Minimises password recall
- Easily fits to a regular key ring
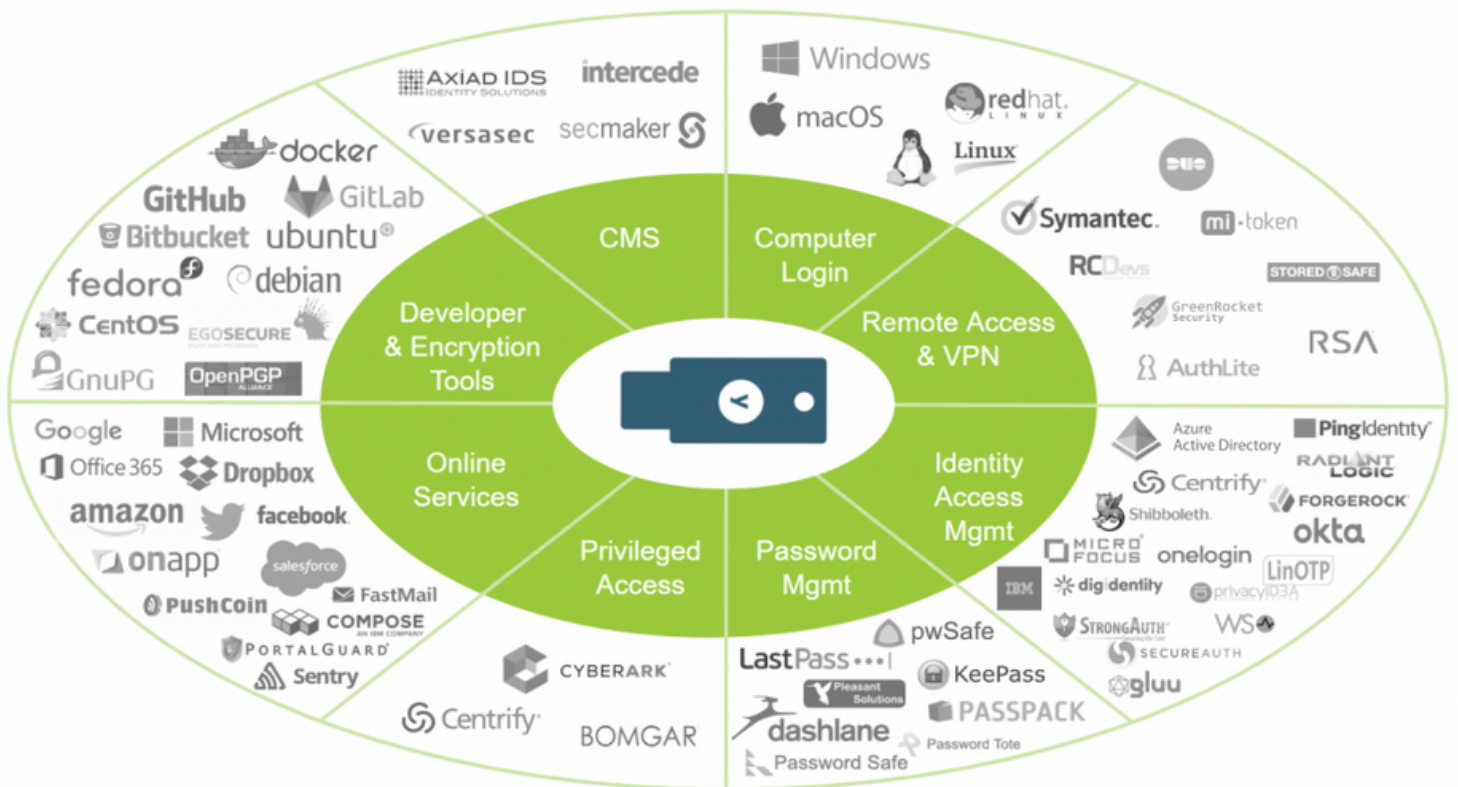

Choice of form factors

Supported Services

Solution Summary

A Security Key provides a simple but very effective method to stop account takeovers.

In order to gain access to an application, the security key must be available as part of the authorisation process.

Since the secret key is stored in the key, this makes it extremely difficult for hackers to gain access to your account.

The key can come in many form factors, including NFC (for non insertion tap and approve), USB-A, USB-C and a combination USB-C / Lightning interface.

Key features

- Strong account security
- Faster account login (up to 4x faster)
- Reduction in support calls
- Secures O365 & GSuite
- Secures Social Media platform access
- Passwordless login for Windows
- Integrates with Password Managers
- No cellular connectivity needed
- Always on security
